To whom it may concern,

I highly recommend Subash Sigdel as a candidate for employment within your organization. In his position as an Artificial Intelligence Engineer, Subash excelled in programming tasks with the aim of improving our software platform.

By making use of advanced deep learning technologies, Subash was highly proficient in implementing solutions to help solve complex challenges. Subash worked within our office via our summer internship program commencing in January 2023. He demonstrated key technical skills that would make him an excellent employee.

Subash far exceeded expectations in the project work that was assigned and proved to be a great asset. He is extremely organized, can work independently, and is able to effectively multi-task to ensure that all tasks are completed in a timely manner.

Due to his excellent performance, we gave him additional responsibilities at great difficulty levels, including the development of an interdisciplinary product that leverages concepts from multiple domains including Natural Language Processing (NLP).

Subash's work that demonstrates the most promise include "Crowd estimation and

analytics", "Soccer analytics using perception transformation", "Conversational bot for virtual conversation practice" and "Constellations detection". Overall, the internship was structured in a way to ensure the interns developed sufficient skill in developing state-of-the-art AI technologies in which Subash went above and beyond in all tasks we assigned to him.

Subash built excellent rapport with the many colleagues in our office and worked well as a team member. He would be an asset to any employer, and I wholeheartedly recommend him for any technical endeavor he wishes to pursue.

Please feel free to contact me if you have any further questions.

Yours Sincerely,
